Families Love Family Night at the Turf!

Families in Juneau have been avoiding cabin fever this Winter by meeting with friends and getting some exercise at Family Night at the Turf. This event takes place on the 4th Friday of every month from 4:30-6pm at the Dimond Park Field House (www.dimondparkfieldhouse.org).

Birds-eye view of the Turf during the month of February

79 people attended in January and 141 people were present in February. Don't let this deter you from coming, at the Turf, we've got enough toys for everyone!

Older siblings sometimes help keep track of their younger siblings!

PLAYGROUND SURFACING

The most exciting product to hit the playground surfacing market is EasyTurf for playground surfacing. Great for both residential and commercial applications, EasyTurf provides everything you could want from a playground surface.

SAFETY IS KEY

Designed to look and feel like natural grass while providing superior protection against falls, cuts and abrasions, EasyTurf Playground is an essential part of any safe children's play area. You can rest easy knowing that your child is playing on the safest turf on earth.

EasyTurf Playground is composed of an exclusive mono-filament fiber that is extremely durable, yet non-abrasive to promote comfort of play and product longevity. The infill consists of a measured combination of sand and crumb rubber to provide the necessary stability to the turf and proper support to the artificial grass blades.

For areas requiring fall height protection, an additional safety Shock Pad System is installed beneath the product. We can accommodate up to 12' fall heights with our product line, exceeding all ASTM requirements.

EasyTurf Playground also conforms to ADA requirements and requires little maintenance. The product's drainage capacity is excellent, and play may resume shortly after a heavy rainfall.

Installation is performed by certified personnel that have been carefully selected for this purpose.

THE BEST LONG TERM SOLUTION

EasyTurf will not harden and crack like pour-in-place rubber systems do and, unlike wood chips, mulch, sand and rubber chunks. EasyTurf will not displace, compact or become messy. Instead, a EasyTurf

Yes!! Collins Turf Division Sells and Installs Rubber Mulch, too.

Rubber mulch complements synthetic turf and landscaping! Made from 100% recycled auto and truck tire ground to pieces sized between 3/8" to 3/4", Rubber Mulch is 99.99% metal-free thanks to high-powered magnets and extremely sensitive metal detectors. The unmatched polyurethane coating chemically bonds with the rubber to provide years and years of lasting color and beauty.

Rubber Mulch meets and exceeds IPEMA and ASTM standards, including ASTM F1951-99 for wheelchair accessibility and ASTM F1292-09 for fall height protection. A 6" depth has been tested for a fall height of up to 16 feet.

Rubber Mulch is an innovative and eco-friendly alternative to traditional wood mulch for landscaping and playgrounds. Compared to wood mulch, rubber mulch is safer, more cost-effective, durable, environmentally friendly and lower-maintenance. Plus, rubber mulch is clean - minimizing airborne dust and particles. Available in six colors and two textures, rubber mulch is a superior solution for every playground and landscaping project.

Technical Synthetic Turf Information

Collins Turf Division is proud to display the many different colors, thicknesses, and varieties of synthetic turf to our customers. We are constantly staying on top of the developments in the turf world by maintaining relationships with our manufacturers and evaluating and pre-empting to our customer turf samples that we have in our office. We have installed turf for numerous manufacturers in the synthetic turf industry. We presently have turf samples from Progreen International, Turf Evolution, Field Turf, ACT Global, AstroTurf, Perfect Turf, Tiger Turf, Synthetic Grass Warehouse, ArtificialTurfSupply.com, Plegra, Oragras, and others. If you request a manufacturer we encourage you to send us your turf samples and literature about your product. We can also have custom turf manufactured for specific installation purposes. Turf goes through rigorous testing by the manufacturers to maintain high quality products. Here is a picture of a machine going through a wear test.

Reducing Yard Costs, Keeping Kids Clean, and Working on your Shortgame

This backyard was designed for a family that had several children of their own and often had the whole neighborhood over to play. The previous yard was highly shaded and a little muddy. After Collins Turf replaced the entire backyard with one color monochromatic synthetic turf for removal from the grass in Canada, the costs of the backyard were reduced, and the family noticed a significant amount of savings on their water bill, and lessened yard maintenance through the summer.

The yard has two large playsets, a nylon putting green, several brown rubber mulch beds, and approximately 4,000 square feet of synthetic turf.

Artificial Grass Replaces Rubber Playground Surfacing

EasyTurf playground products are safer, cleaner and softer than any other artificial or organic play surface including the best rubber playground surfacing. EasyTurf artificial grass is quickly replacing even the best rubber playground surfacing because it is extremely durable, yet non-abrasive, providing longevity and a comfortable commercial playing surface. EasyTurf artificial grass for commercial playground surfacing also greatly reduces threats from insects, unwanted pests and grass allergies.

IPEMA Certified, EasyTurf is able to meet the ASTM 1292 fall height requirements for up to 9 ft. (14' heights can be certified with additional ASTM testing) feet and meets ASTM 1951 ADA certification requirements.

When it comes to creating a safe, durable artificial grass surface, no one in the industry has the experience, technical know how, and financial stability of EasyTurf, a EasyTurf company. Not only do kids love EasyTurf playground artificial grass more than any other playground including commercial rubber playground surfacing, but parents and administrators across North America are quickly adopting this innovative artificial grass playground surfacing solution.

The EasyTurf Playground System is engineered for safety.

Specially engineered for maximum durability while remaining exceptionally soft and smooth to the touch, our artificial grass fibers for playground surfacing eliminate friction burns associated with other surfacing including rubber playground surfacing.

Unique Infill System

Products

EasyTurf Playground's infill system consists of a thin base layer of clean sand, providing a solid foundation to support the fibers, and is then filled with screened, smooth (SBR) crambient rubber. This creates a surface which provides maximum impact protection and cushioning against falls that is much softer than alternative surfacing materials.

Superior Drainage

Physical activity is an important part of any child's daily routine. Exercise can be difficult to schedule if it's wet and slippery outside. EasyTurf uses a proprietary 100% permeable artificial grass playground surface backing, MaxxFlow, for unmatched drainage capabilities. Unlike with grass, precipitation will not turn your playground surface into a mud pit. There is no need to keep kids cooped up inside, play can resume shortly after heavy rainfalls! Our exclusive MaxxFlow artificial grass backing also provides a built-in weed barrier.

FallSoft™ Technology

Studies have shown that falls to the surface including rubber playground surfacing contribute up to 80% of all playground injuries. We can't stop kids from being kids, but we can improve the safety of their playground surface area. Our FallSoft™ technology incorporates a water permeable safety pad installed beneath the product to provide additional protection against falls from play equipment. EasyTurf is able to meet the ASTM 1292 fall height requirements for up to 9 ft. (14' heights can be certified with additional ASTM testing) and meets ASTM 1951 ADA certification requirements.

While an EasyTurf Playground provides a safe surface which specifically protects against concussions and head injuries caused by falls from high playground equipment to the commercial playground surface, it is also the ideal solution for a children's play area normally covered with natural grass. EasyTurf artificial grass for playgrounds creates an attractive environment which is insect-free and provides a uniform, consistently safe commercial artificial grass playground surface which is smooth and easy on the skin.

EasyTurf artificial grass for commercial playgrounds is the only alternative which provides a safe surface with minimal headaches, while creating a play area which looks the way it was meant to be – like a natural environment. Other surfacing options have drawbacks which are hard to ignore. Tan bark and commercial rubber playground surfacing chunks deteriorate and displace over time and require continuous maintenance such as leveling, grading, and raking to maintain appropriate depth and sifting to remove foreign matter. The commercial rubber playground surfacing often gets into the children's shoes and finds its way into your interior space. Small commercial rubber playground surfacing pieces also present a choking hazard and can get into the eyes. Shredded rubber tires alone are susceptible to many of the same drawbacks such as displacement, and the presence of foreign substances mixing into the fill. Full rubber tiles can curl up and cause tripping, not to mention having a surface characterized by higher friction, which can burn the skin on falls. With EasyTurf artificial grass for commercial playgrounds, you can expect your surface to last almost twice as long as competing poured-in-place rubber playground surfacing systems, which crack and harden over time.

*We firmly believe in a safe surface which can be enjoyed by all, which is why we designed EasyTurf artificial grass for commercial playgrounds to be accessible to children of all levels of ability, and compliant with the Americans with Disabilities Act.

EasyTurf artificial grass for commercial playgrounds pays for itself

Less time and money spent on rubber and other playground surface maintenance, watering and fertilizing means that over the life of the artificial grass, EasyTurf artificial grass for commercial playgrounds will pay for itself! However, minor maintenance is necessary to ensure your product performs its best. Speak to your EasyTurf artificial grass for commercial playgrounds representative about the proper maintenance activities required.

Financing

Play Now, Pay Later! The safety of children is not something that should be compromised because of a lack of funds. However, limited budgets are a fact of life. Although upfront costs may be slightly discouraging, the immediate safety and long term financial benefits are well worth the investment. With our new financing plan, you don't have to wait any longer to have the commercial playground surface of your dreams. Make a small down payment, then pay the rest later! Ask your EasyTurf artificial grass for commercial playgrounds representative about financing today!

ARTIFICIAL GRASS FOR
PARKS AND SCHOOLS,
SAFETY FIRST!

When selecting the perfect children's playset, safety should be your #1 concern, as should the **artificial grass** surface underneath the playset. Most playground injuries occur as the result of a fall on a hard, abrasive or unsafe surface. **GTR Turf** will help you choose and install the safest, most consistent **playground surface** anywhere, one that will conform to the strict safety standards and stand the test of time. There are numerous varieties of **synthetic grass** that have been specifically designed for all types of **playground equipment**, some of which can protect children from falls as high as 12 feet.

KOMPAN North America Selects EasyTurf for Exclusive Install Arrangement

Playground KOMPAN North America has selected EasyTurf as the exclusive artificial grass supplier for its playground design and construction projects nationwide.

VISTA, California (PRWEB) May 28, 2013

Artificial turf industry leader EasyTurf, Inc. has been selected by playground industry leader [KOMPAN North America, Inc.](#) to be the exclusive supplier of artificial grass for its nationwide playground construction projects. KOMPAN chose EasyTurf synthetic grass based on its proven performance as one of the safest, longest-lasting, most efficient draining and most realistic artificial grass products available today.

The agreement between [EasyTurf](#), the landscape arm of Field Turf, and the playground systems and equipment company reaffirm both companies' cutting-edge leadership position in the recreation and playground landscape marketplace.

After conducting an exhaustive product line review to meet its rigorous quality and safety requirements, KOMPAN found EasyTurf to be the only company capable of meeting their high standards at every installation location. KOMPAN creates unique recreational play structures and playgrounds throughout the U.S. and worldwide.

In recent years, synthetic turf has become the preferred landscape design solution for playground applications, surpassing sod and other natural landscape products. EasyTurf synthetic grass received the highest IPEMA safety certifications and KOMPAN, recognized these marketplace demand factors.

"At KOMPAN North America, we are dedicated to creating exceptional play environments that promote healthy opportunities for users of all ages and all abilities," says Jay Cooke, KOMPAN Vice President Sales, North America. "It is critical that our supplier partners offer a product that is superior in performance, while also delivering a clear and meaningful difference within their category.

"Our partners must also share complimenting principles with respect to innovation, value, service and long-term product durability; after an extensive review process and analysis, it was evident that EasyTurf was the best synthetic turf partner for KOMPAN North America."

Applications for artificial grass surfacing on playgrounds and in recreational areas continue to grow throughout North America. Artificial turf, originally known for its sports field and golf course applications, has experienced a boost in popularity in the commercial and residential landscape sectors as well as in school, daycare and pet facilities. Costly maintenance and water rate increases have also driven the switch to artificial grass for municipal landscapes and pet facilities.

KOMPAN and EasyTurf partnered to complete playground restoration at Ewa Beach, Hawaii

“ Applications for artificial grass surfacing on playgrounds and in recreational areas continue to grow throughout North America. ”

Helping Special Needs Children at School with Synthetic Turf for Play Areas

by NYC PRIVATE SCHOOLS BLOG ADCONNECT on AUGUST 20, 2012

Welcome **Googler!** If you find this page useful, you might want to [subscribe to the RSS feed](#) for updates about NYC Private Schools.

This post is from the NYC Private Schools Blog [AdConnect Platform](#).

Providing for special needs children can be a challenge for schools both inside classrooms and outside on fields and playgrounds. Synthetic turf is an innovative solution for many of the problems these kids and their schools encounter outside, helping kids to have safe, healthy, and happy outdoor areas for play.

Autism and other conditions often affect how kids sense and react to their environment, including common materials used in playgrounds as ground cover like bark, rocks, or dirt. These children may put materials like these in their mouth even when they are older, or find the materials disturbing to the touch.

The ABA/Chrysalis Academy in Tempe, Arizona enrolls younger children up to grade four who have conditions that affect their social, language, and behavioral skills. When [NewGrass®](#) was installed at the school, the staff found an immediate improvement in how they could use the outdoor space. While these children often put other materials in their mouths, the problem went away when NewGrass was installed.

Creating outdoor areas where kids and staff are more comfortable also means that they can use playgrounds like fields for other purposes like outdoor learning, getting out of the classroom on nice days. "Not only has it helped the children, it's given us a whole new teaching area - outdoors on a nice lawn," said Patty McCartney, director of the school. "The kids and teachers just love it. We've been doing a lot of the group activities outside. It's opened up a new space for us."

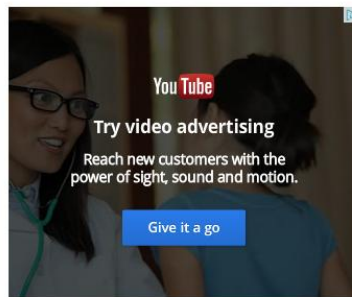

Natural grass can look great on a field when it grows well, but it doesn't always grow well. Schools can find growing grass difficult where it's too hot and dry, or too cold and wet. A field for play can end up as a dirty dusty lot, or a muddy pit. Places where it snows and freezes also find it hard to grow grass, while synthetic turf takes care of itself once it's installed.

Natural grasses also cause allergies for many students, and special needs children can suffer more from allergies than others. Changing to synthetic turf reduces allergies, and may even reduce the impact of serious health issues like asthma.

Injuries are another health concern for all kids on playgrounds, and synthetic turf may also provide for fewer injuries. While many groundcovers don't insulate falls, synthetic turf like [NewGrass®](#) can include a layer of protective coating that reduces the impact of falls.

Some of these benefits may be pronounced for special needs kids, but that doesn't mean they aren't enjoyed by all other kids too.

When [NewGrass®](#) was installed at the Armbrae Academy in Nova Scotia,

INDEPENDENT SAFETY STUDIES OF SYNTHETIC GRASS

Posted on August 1, 2011 by admin

The safety of artificial turf was validated on July 30, 2008 when the U.S. Consumer Product Safety Commission (CPSC) staff released the results of its study of lead in synthetic turf, and it concluded that *"young children are not at risk from exposure to lead in these fields."* In over 40 years there has never been an instance of human illness or environmental damage caused by synthetic turf.

Today, artificial turf is made without lead as a pigment ingredient. This change in the pigment formulations was a voluntary and responsible response by the synthetic turf industry to the CPSC's request that lead be removed from all products, if possible.

During the past few years, more than 75 independent studies concerning the safety of synthetic grass have been conducted by groups such as:

U.S. Consumer Product Safety Commission,
U.S. Environmental Protection Agency
New York State Department of Environmental Conservation
New York State Department of Health, and the

Play Surfaces for Children

Childrens' Play Area

Many daycare center clients have shared that artificial turf surfaces attracted new business by giving parents the peace of mind of a safe and fun grassy outdoor play environment.

Artificial turf systems are made of an exclusive monofilament fiber that helps make the grass the most durable and safest solution available – especially compared with pour-in-place rubber or wood chips. In fact, you can expect a lifespan of the artificial grass to last at least 20-25 years, and our artificial grass systems remain as safe on day 5,000 as on Day One. It costs nothing to get a **FREE ESTIMATE**.

Specific advantages of Artificial

Grass include:

- Faster drainage and less maintenance than real grass so you will have less "indoor time."
- Comfortable, non-abrasive surface of grass for fewer skinned knees.
- Fall height **safety** up to 9 feet, exceeding all ASTM requirements – it's the same on Day 5,000 as Day One.
- No splinters.
- Elimination of allergens.

You won't see any fading of the artificial grass unless you get out your microscope. Artificial turf has a built-in UV protection solution that helps it hold its color even under the most dramatic conditions of near constant, direct sunlight. Independent studies show that artificial turf will fade at a rate of less than 1% per year and most are covered by a **warranty**. This means that after even 10 years in direct sunlight, any color change of the artificial grass will still be imperceptible to the human eye.

Due to the extremely porous drainage design of our artificial grass systems, mold and mildew are never a

can be claim to the only synthetic turf mill that has been proven to be antimicrobial because it inhibits the growth and survival of micro-organisms.

Sticky spills on the grass can be hosed down to prevent them from attracting dirt and bugs. *Even paint spilled on the grass can be softened with paint remover and rinsed right off!*

Maintenance of artificial grass?

Hardly any! With playground artificial turf, you can expect:

- No hardening or cracking
- No compaction issues
- No displacement issues
- No weeds
- No foreign objects buried
- No mess on kids or tracked inside

Artificial grass systems employ the latest in technology to look and feel just like real grass, without the constant upkeep or environmental impact of machines and chemicals.

San Diego's [Green Gardening Today](#) employs experts in the [installation](#) of the most advanced and realistic artificial grass in the industry. We make certain every synthetic lawn installation is done the right way.

If you live in San Diego County and you would like to know how much it would cost for us to install artificial turf, we offer [FREE ESTIMATES](#).

Playground Products

Hours of fun for kids ... **peace of mind for parents**

Playgrounds with safety built in

When it comes to your kids, nothing is more important than their safety. When it comes to selecting the perfect play set, safety is your number one concern. After selecting your kids' play set consider the playground surface underneath. Most injuries on playgrounds occur as the result of a fall on surfaces that are abrasive, hard or just plain unsafe. That's where the SYNLawn®

Types of Artificial Turf HGTV

Learn more about how to use **artificial turf** with these tips for creatively designing your outside grass and garden spaces.

Artificial turf has many benefits: It doesn't need mowing, watering, or feeding; it's green all year round; and it can be as soft as real grass. From a distance it can be difficult to tell the real from the fake. Here are a few ways to make artificial turf work for your outdoor space.

Eating Outside

Dining al fresco is one of the pleasures of having a garden, and there are many benefits to using artificial grass to carpet outdoor dining spaces. In this area, you can sit on the grass and enjoy the view without the worry of it wearing away. Artificial turf is a good choice here because it won't stay damp like natural grass, so furniture won't rust or rot. Since the grass doesn't need mowing, the heavy furniture won't have to be moved each week in summer.

Eating Outside is Pleasure of Having Garden+

Kids' Play Area

Lawns can take a real battering in areas of the garden that children regularly play in and may often need repairing or patching. By using artificial grass instead, this garden looks fun and enticing for children yet will be robust enough to stand up to games, sports, and general wear and tear. Another great advantage is that the surface won't get muddy so children are less likely to bring dirt into the house.

PLAYGROUND TURF

Artificial Grass for Playgrounds

A true test to the Ameriturf synthetic grass system is a safety surface for playgrounds that meet & exceed the standards set forth by the NPSI, & ADA.

Today, playgrounds are designed with safety #1, yet playgrounds have excluded the natural looking elements that a synthetic or astro turf type grass could provide.

Unlike the astro products of the 70s, today's artificial turf products are strikingly real, durable & revolutionizing the safety surface industry. Putting the look of nature back in your playground safety surface with Ameriturf is a great advantage, while retaining all necessary safety features. Ameriturf's synthetic playground grass is softer, cleaner, and most important... safe.

Undoubtedly, a tot lot or playground safety surface receives more foot traffic and redundant wear patterns than say a sports field. This constant wear and traffic takes its toll on most conventional safety surfaces such as poured rubber, wood-chips, & sand. Taken from years of sports surface industry know how & technology, elevating performance and wear-ability, producing the Ameriturf Green-play safety surface.

Cost is one of the most asked questions regarding any safety surface product, and Ameriturf prides itself on being cost conscience knowing that a safety surface can make or break a playground project. Also knowing open market cost-factors for most safety surfacing, helps us engineer and drive our installed pricing "below" most synthetic safety surface products, saving you money while having a performance & appealing safety surface.

Why an Ameriturf playground turf for your next playground safety surface?

The answer is simple... most surfaces offered just don't give you a clean, soft and long-lasting system. Playground tiles can be hard and abrasive. Poured rubber just doesn't last like it's suppose to, wood chips and rubber mulch products get displaced easily and really don't meet ADA requirements. Ameriturf Systems Playgreen Grass is by far and above the most durable on the artificial grass on the market & tested to withstand minimally 12-years of wear. Other companies are relying on cheap "silt-film" products as the primary wear system, but these dated grass fibers simply will not hold up under high wear patterns of a playground.

Synthetic Playground Grass Installation in Santa Monica, California.

Trends

Playground grass is somewhat new to the playground safety surface market, but has been in use on sports fields for over 30-years. In recent years, silt film fiber fields are falling due to UV breakdown and wear. Synthetic Fields that were

Research: Most artificial grass products available as a safety surface are using "old" silt film turf technologies that really don't stand-up to heavy traffic or UV degradation. Ameriturf has relied on true and tried laboratory testing and the latest monofilament fibers that can withstand 12-years of abuse, while retaining look and performance.

Modern Synthetic Grass Fibers

- Because Ameriturf uses the latest fiber technology that is laboratory tested to withstand minimally, 12-years of constant foot-traffic, UV degradation, and wear abrasion, your playground will have one of the most proven synthetic grass safety surfaces on the market.
- With an advanced impact and rebound system installed under the synthetic turf and absorbing rubber infill between the polyethylene-grass blades, it acts as a double cushion barrier for extreme fall protection.
- Polyethylene fibers, washed SBR rubber infill, & polyurethane coatings all add up to and non-bacterial promoting safety surface system that is safe and clean for both environment & health.

With over a million square feet of synthetic play surfaces installed, there's not a job we can't handle and to create a more appealing and safe play area for your facility.

A fresh look and approach at making your play-area exciting and appealing for children to play, while retaining all the safety benefits of traditional safety surfaces on the market, is what Ameriturf [artificial grass](#) is about.

Comprehensive cost structure that meets and most often beats traditional safety surface costs, installed.

EasyTurf Grass Play Surface is Far Superior to a Rubber Playground Surface

An EasyTurf artificial grass play surface is safer, cleaner and more comfortable than natural sod or a rubber playground grass surface. EasyTurf artificial grass greatly reduces threats from insects, unwanted pests and grass allergies. The superior synthetic grass installation is able to meet the ASTM 1292 fall height requirements for up to 9 ft. (14' heights can be certified with additional ASTM testing) and meets ASTM 1951 ADA certification requirements. An EasyTurf artificial grass play surface is extremely durable, yet non-abrasive, promoting longevity far superior to a rubber playground surface with a comfortable playground safety surface.

Artificial Grass Play Surface Benefits

- A play surface that eliminates mud and grass stains
- No fertilizers and pesticides needed for the non rubber playground grass surface
- Hypoallergenic and inherently antimicrobial play surface
- Most durable playground safety surface available
- Forgiving, cushioned playground safety surface comforts falls
- No artificial grass deodorizers or additives needed
- Dramatically improves water conservation

Ultra-Realistic Play Surface

- A state-of-the-art play surface polymer formula creates realistic fiber movement
- Proprietary, precision manufacturing produces the softest playground safety surface and texture available
- A new matte artificial grass finish increases color brilliance
- 11 exterior and seven interior ridges combine for maximum playground surface safety resilience

Play Hard, Fall Soft: Quality & Playground Surface Safety Innovation

Soft Fall Technology

IPEMA Certified, EasyTurf is able to meet the ASTM 1292 fall height requirements for up to 9 ft. (14' heights can be certified with additional ASTM testing) and meets ASTM 1951 ADA certification requirements. This playground safety surface, including play pad, is extremely durable yet non-abrasive, promoting longevity with a comfortable play surface. (Comprised of pre-consumer recycled materials)

Ideal For:

This proprietary artificial grass backing, exclusive to EasyTurf and FieldTurf products provides a built in artificial grass weed barrier with unmatched synthetic grass drainage capacity. Liquids flow through this integrated MaxFlow backing at rates ten times higher than other artificial turf backings.

- Drains faster and cleaner than real grass 100% drainage with zero absorption
- 100% permeable artificial grass backing that eliminates the need for deodorizers and ammonia absorbing additives
- Increased play surface playing time by quickly draining precipitation away
